

## **Greece**

How much relief is actually needed to restore  
public debt sustainability

### **Important Note**

The material presented herein is based on a number of published official documents that include, inter alia, the European Commission's compliance report on the first review of Greece's Third Economic Adjustment Programme (June 2016) and the IMF's Article IV consultation report (February 2017). The study attempts a replication of the debt sustainability analyses (DSA) presented in the aforementioned on the basis of a number of simplifying (yet necessary) assumptions made by the author to make up for some important information pieces that are missing from the official documents. Therefore, the numerical results presented in this study may deviate somewhat from the respective official estimates and projections. See also important disclaimer at the last page (#30) of this report

### *Sustainability through the lens of the IMF staff (Article IV – February, 2017)*

- ❑ **Gross financing needs (GFN) as percent of GDP expected to cross** the 15% threshold already by 2024 and the 20% threshold by 2031, reaching around 62% by 2060
- ❑ **This renders Greece's public debt ratio highly unsustainable** in the medium- & long-term (projected to reach 275% of GDP by 2060), despite generous large-scale flow relief received thus far
- ❑ **This unsustainable trajectory is attributed to:** a) downward revisions in the medium- and long-term forecasts for GDP growth and the general government primary balance; and b) the fact that, after 2018, Greece will need to re-access market financing and thus, roll over maturing debt at interest rates significantly higher than the current (concessional) ones paid on official loans
- ❑ **In order to address the issue of sustainability**, the Fund's revised debt sustainability analysis (DSA) has presented an indicative debt relief package (OSI) which would ostensibly be adequate to broadly keep Greece's GFN ratio to levels no higher than 15% of GDP during the post-programme period for the medium-term and 20% of GDP in outer years
- ❑ **In view of the aforementioned**, the IMF has stressed the need to bring forward significant debt relief (i.e., even before the expiration of the current programme, in a gradual/conditional manner) so as to facilitate a swift restoration of investor confidence towards Greece

### *The views of the EU institutions (European Commission, Compliance Report, June 2016)*

- ❑ **In their latest (June 2016) DSA for Greece**, the European Commission portrayed a more optimistic view than that of the IMF on the basis of more benign assumptions regarding the future path of the general government primary balance as well as the medium- and long-term growth outlook of the Greek economy
- ❑ **Nevertheless**, the Commission's analysis concluded that the projected evolution of Greece's public debt and gross financing needs ratios point to serious sustainability-related concerns that shall be addressed through the implementation of the far-reaching reforms, strong reforms ownership by the Greek authorities and debt-mitigating measures granted upon full implementation of the conditionality agreed in the context of the ESM programme

## Summary of views (continued)

# How much relief is actually needed to restore Greece's public debt sustainability

---

### *The view of the IMF staff (Article IV – February, 2017)*

- ❑ **In the IMF's latest (Jan./Feb. 2017) Article IV report**, the modalities of an indicative relief package to reinstate public debt sustainability are presented. This involves: a) significant maturity extensions, between 10 and 30 years; b) longer deferrals of interest and principal payments, between 6 and 21 years; c) fixing the interest rates at pretty concessional levels i.e., 1.5% per year until 2040 and 3.8% afterwards; and d) returning to Greece the profits accrued from 2019 onwards to the Eurosystem's ANFA and SMP portfolios plus a relevant amount of €1.8bn, which is pending from 2014
- ❑ **Importantly**, the aforementioned relief structure involves all European loans given to Greece; that is, all loans that have already been disbursed under the three bailout programmes, or will be disbursed under the present ESM facility

### *Debt relief framework for Greece agreed at the Eurogroup of May 25, 2016*

- ❑ **At the Eurogroup of May 2016**, the European creditors have agreed on a short-, medium- and long-term debt relief framework that will be subject to the pre-defined conditionality of the ESM programme and will be phased in progressively so as to ensure that Greek public debt remains sustainable under the new operational definition of sustainability
- ❑ **The modalities of the short-term leg** of the said framework were unveiled last December (and the relevant interventions are already in their implementation stage), while the medium- and long-term measures are to start being implemented upon the successful completion of the present ESM programme i.e., after August 2018
- ❑ **Importantly**, the scope and modalities of the medium- and long-term debt relief framework do not appear adequate enough to fully restore the sustainability of Greek public debt under significantly more downbeat macro assumptions than these assumed in the latest DSA analysis published by the European institutions (June 2016); that is, unless the aforementioned framework is probably implemented in its most radical and far-reaching form
- ❑ **In support of the aforementioned**, we note that a significant part of debt relief implied by the existing medium- and long-term framework is projected to come from some targeted reprofiling of the EFSF loans (c. 60% of all EU loans disbursed thus far and c. 52% of the latter plus the new ESM loans that are expected to be disbursed under the current programme – all in notional terms), without incurring any additional costs for former programme countries or to the EFSF
- ❑ **On the other hand**, the existing framework does not envisage any interventions in/reprofiling of the remaining package of EU loans to Greece (GLF facility & ESM)

*A key takeaway from the aforementioned analysis that relates to the ongoing discussions between the European creditors and the IMF on additional debt relief for Greece is as follows: the views of the two sides on a) the baseline macroeconomic assumptions underlying their respective debt sustainability analyses and/or b) the modalities and scope of debt relief that can be provided to Greece in the medium- and long-run should converge more substantially to facilitate the Fund's financial participation in the present programme*

---

## Key findings

---

### Public debt sustainability analysis (DSA)

*Contrasting the latest baseline DSAs of the IMF and the EU institutions*

#### □ **Projected gross financing needs as % of GDP (annual average, 2017-2060)**

- European Commission: c. 18% (exceeds the 20% threshold long-term i.e., 2040 onwards)
- IMF: c. 34% (exceeds the 20% threshold already by 2031)

*Sensitivity to underlying macro assumptions (based on the EU institutions' DSA & Eurobank Research projections)*

#### □ **Projected gross financing needs as % of GDP (annual average, 2017-2060)**

- Baseline: 18.3% (exceeds 20% threshold over the medium and long-term i.e., 2040 onwards)
- Higher GDP growth (+0.5ppts/annum): lower by c. 3.0ppts vs. baseline
- Lower GDP growth (-0.5ppts/annum): higher by c. 3.5ppts vs. baseline
- Higher primary surplus (+0.5ppts of GDP/annum): lower by c. 2.9ppts vs. baseline
- Lower primary surplus (-0.5ppts of GDP/annum): higher by c. 2.9ppts vs. baseline
- Higher average market refinancing rate (+50bps/annum): higher by c. 1.3ppts vs. baseline
- Lower average market refinancing rate (-50bps/annum): lower by c. 1.3ppts vs. baseline

*Sensitivity to relaxation of the medium-term fiscal targets (based on the EU institutions' DSA & Eurobank Research projections)*

#### □ **Projected gross financing needs as % of GDP (annual average, 2017-2060)**

- Primary surplus target lowered to 1.5% of GDP from 2022 onwards: 5.1ppts higher vs. baseline
  - with higher GDP growth (+0.5ppts/annum): 1.7ppts higher vs. baseline
  - with lower GDP growth (-0.5ppts/annum): 9.1ppts higher vs. baseline
- Primary surplus target lowered to 1.5% of GDP from 2024 onwards: 4.1ppts higher vs. baseline

## Key findings (continued)

---

### Medium- to long-term debt relief scenarios

*Contrasting the latest DSAs of the IMF and the EU institutions*

#### ❑ **Projected gross financing needs as % of GDP (annual average, 2017-2060)**

- European Commission (baseline / no debt relief): c. 18% (exceeds the 20% threshold long-term i.e., 2040 onwards)
- IMF (baseline / no debt relief): c. 34% (exceeds the 20% threshold already by 2031)

*Debt relief scenarios*

#### ❑ **Projected gross financing needs as % of GDP (annual average, 2017-2060)**

- IMF macro assumptions with debt relief Scenario I: c. 12% (remains within sustainability range over full projection horizon)
- IMF macro assumptions with debt relief Scenario II: c. 25.5% (exceeds sustainability threshold long-term)
- EC macro assumptions with debt relief Scenario II : 14% (remains within sustainability range over full projection horizon)
- EC with 1.5% of GDP primary surplus after 2023 & debt relief Scenario II : 25.5% (exceeds sustainability threshold from mid-2025 onwards)

*Modalities of debt relief packages*

#### ❑ **Scenario I** (in line with IMF Article IV, Jan/Feb 2017)

- Debt relief implemented after expiration of current programme (mid-2018)
- GLF - loan maturity extension (30 years) along with longer deferrals on interest and principal payments (by 21 and 20 years, respectively)
- EFSF - loan maturity extension (14 years) along with longer deferrals on interest and principal payments (by 20 and 17 years, respectively)
- ESM - loan maturity extension (10 years) along with longer deferrals on interest and principal (by 19 and 6 years, respectively)
- Interest on deferred interest assumed to accrue at a fixed rate of 1.5% per year until 2040 and a long-run official rate of 3.8% afterwards
- Return of ANFA and SMP profits: €1.8bn pending from 2014 plus profits accrued from 2019 onwards

#### ❑ **Scenario II** (hypothetical; deemed to be compatible with the framework agreed at the 25 May 2016 Eurogroup)

- Return of ANFA & SMP profits
- Removal of step-up interest rate margin related to debt-buyback loan tranche
- Full deferral of all EFSF loan principal payments to post-2060 period

## **Part I**

Greece public debt sustainability analysis

*Comparing the views of the IMF staff and the European Institutions*

## **Section I.1**

Greece public debt sustainability analysis  
*through the lens of the IMF staff*

# The view of the IMF staff

## Greek public debt highly unsustainable without further significant relief

**General government gross financing needs as % GDP (\*)**  
IMF baseline scenarios (no debt relief)

(\*) The depicted evolution of the GFN ratio may deviate somewhat from what is projected in the respective IMF DSAs due to differences in some underlying assumptions

**IMF baseline scenarios**  
Key assumptions

	June 2015	May 2016	January 2017 & WEO April 2017
<b>Medium- and long-term average nominal GDP growth (%)</b>	3.5%	3.0%	2.8%
<b>General government primary surplus (% GDP) post-programme</b>	3.5%	1.5%	1.5%
<b>Set aside for bank recap needs (EUR bn)</b>	none	€10 bn	€10 bn
<b>Market refinancing rates (%)</b>	6.25% average over the next several decades	6.00% in 2019; +/-4bps afterwards per +/-1ppt change in debt ratio	6.00% in 2019; +/-4bps afterwards per +/-1ppt change in debt ratio

# The view of the IMF staff

Public debt ratio to follow explosive path after 2030 without further significant relief

**Gross public debt as % GDP (\*)**  
IMF baseline scenarios (no debt relief)

(\*) The depicted evolution of the GFN ratio may deviate somewhat from what is projected in the respective IMF DSAs due to differences in some underlying assumptions

**IMF baseline scenarios**  
Key assumptions

	June 2015	May 2016	January 2017 & WEO April 2017
<b>Medium- and long-term average nominal GDP growth (%)</b>	3.5%	3.0%	2.8%

# The view of the IMF staff

## Indicative debt relief scenario to reinstate Greek public debt sustainability (Jan 2017)

### Gross financing needs (% GDP)

IMF DSA (Jan 2017)

Baseline vs. debt relief scenario

### Gross public debt (% GDP)

IMF DSA (Jan 2017)

Baseline vs. debt relief scenario

### Debt relief assumptions

- **Debt relief** implemented after expiration of current programme (mid-2018)
- **GLF** - loan maturity extension (30 years) along with longer deferrals on interest and principal payments (by 21 and 20 years, respectively)
- **EFSF** - loan maturity extension (14 years) along with longer deferrals on interest and principal payments (by 20 and 17 years, respectively)
- **ESM** - loan maturity extension (10 years) along with longer deferrals on interest and principal (by 19 and 6 years, respectively)
- **Interest on deferred interest** assumed to accrue at a fixed rate of 1½ % per year until 2040 and a long-run official rate of 3.8% afterwards
- **Return of ANFA and SMP profits:** €1.8bn pending from 2014 plus profits accrued from 2019 onwards

# Indicative debt relief package for Greece

## Implied cash flow & stock implications

### Cash flow relief in NPV terms

Time evolution of NPV savings as % of GDP (\*)  
from  $t_0 = 2017$  to  $T = 2060$   
Baseline vs. debt relief scenario (\*\*)

### Stock relief

Decline of debt to GDP ratio due to debt re-profiling  
Baseline Vs. debt relief scenario (\*\*)

(\*) Discount rate for NPV calculation assumed at 3%

(\*\*) Modalities of baseline and debt relief scenario similar to these assumed in the previous page

## **Section I.2**

Greece public debt sustainability analysis

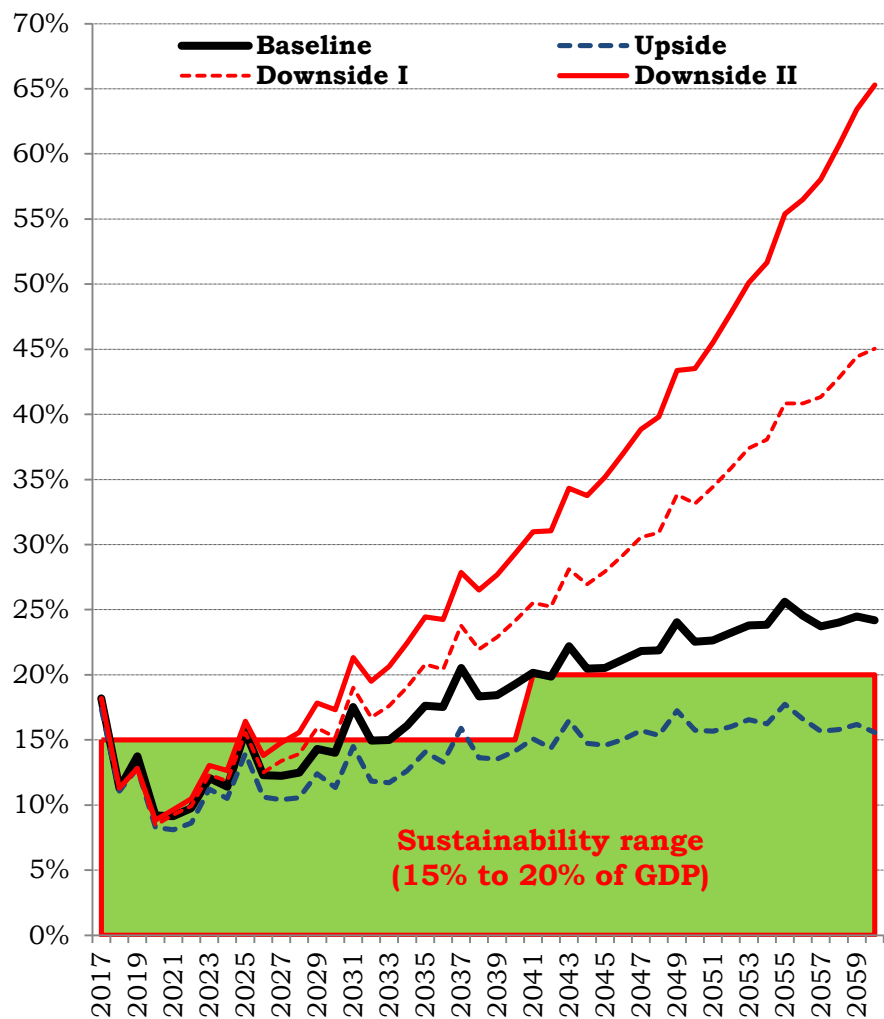

*Contrasting the views of the IMF staff and the European Institutions*

# The view of the EU institutions

## More benign baseline scenario relative to the IMF, but debt relief still needed

**General government gross financing needs as % GDP (\*)**  
EC baseline & scenarios (no debt relief)

**EC baseline scenarios**  
Key assumptions

(\*) The depicted evolution of the GFN ratio may deviate somewhat from what is projected in the respective IMF DSAs due to differences in some underlying assumptions

	Baseline	Upside	Downside I	Downside II
<b>Medium- and long-term real GDP growth (%)</b>	1.5% after 2021 & 1.25% after 2030	0.25 pp higher relative to baseline after 2019	0.25 pp lower relative to baseline between 2019 & 2030	0.25 pp lower relative to baseline between 2019 & 2030
<b>General government primary surplus (% GDP)</b>	3.5% for 10 years post-programme & decreasing gradually to 1.5% by 2040	assumed to average 2.4% of GDP in post-programme period	assumed to average 2% of GDP in post-programme period	assumed to average 1.7% of GDP in post-programme period
<b>Privatization revenue</b>	€18 bn	€20 bn over 2015-2022 (c. €50bn over entire projection horizon - Eurobank Research)	€6.5 bn (Eurobank Research assumption)	€6.0 bn (Eurobank Research assumption)
<b>Average market refinancing rate (%) post-programme</b>	5.0%	5% (Eurobank Research assumption)	6.5% (Eurobank Research assumption)	7.3% (Eurobank Research assumption)

# Greek public debt sustainability

## Contrasting the views of the IMF and the EU institutions

### General government gross financing needs as % GDP (\*)

Most recent baseline scenarios

(\*) The depicted evolution of the GFN ratios may deviate somewhat from what is project in the respective DSAs due to differences in some underlying assumptions

### Baseline scenarios

Key assumptions

	IMF (January 2017)	European Commission (June 2016)
<b>Medium- and long-term average nominal GDP growth (2024 onwards)</b>	2.8%	3.2%
<b>General government primary surplus (% GDP), post-programme period average</b>	1.5%	3.5% for 10 years post-programme & decreasing gradually to 1.5% by 2040
<b>Privatization revenue</b>	€10 bn	€18 bn
<b>Set aside for bank recap needs (EUR bn)</b>	€10 bn	none
<b>Market refinancing rates (%)</b>	6.00% in 2019; +/-4bps afterwards per +/-1ppt change in debt ratio	5.00% average in post-programme period (Eurobank Research assumption)

# Greece: short-term debt relief package

Approved at the Eurogroup of December 5, 2016

## I. Smoothing of the EFSF repayment profile

Description: 4-year extension in the weighted average maturity of EFSF loans provided to Greece in the context of the 2nd bailout programme.

Objective: reduce refinancing risks for the Greek state, by back-loading EFSF loan amortizations and creating a much lighter (and smoother) redemptions profile over the next two decades or so.

Impact (FY-2060): -3.6ppts and -0.8ppts respective reductions in public debt and GFN ratios.

## II. Use of the EFSF/ESM funding strategy to reduce interest rate risk

**Scheme 1** - Issuance of long-term fixed rate notes and bonds to the market with maturities up to 30 years, with a view to fund the repurchase of floating rate notes held by Greece's four systemic banks.

Impact (FY-2060): -7.1ppts and -1.6ppts respective reductions in public debt and GFN ratios.

**Scheme 2** - Use of interest rate swaps to mitigate the risk of higher market rates, with the ensuing benefits to Greece from a sustainability standpoint varying with maturity, the rate and the size of the swap transactions that can be executed in the market.

Impact (FY-2060): -6.9ppts and -1.5ppts respective reductions in public debt and GFN ratios.

**Scheme 3** - Use of matched funding, via ESM fixed rate long-term issuances with maturities up to 30 years, for part of future disbursements to Greece under the current programme (c. €30bn).

Impact (FY-2060): -1.3ppts and -0.3ppts respective reductions in public debt and GFN ratios.

## III. Waiver of the step-up interest rate margin on the DBB tranche

Description: waiver of the step-up interest rate margin related to the debt buy-back tranche (€11.3bn) released in the context of the 2nd bailout programme.

Impact (FY-2060): -0.3ppts and -0.1ppts respective reductions in public debt and GFN ratios.

**Total projected impact of measures I, II, & III (FY-2060)**: -21.8ppts and -4.9ppts respective reductions in public debt and GFN ratios.

# Short-term debt relief package for Greece

## Impact of EFSF loans re-profiling

### European Central Bank Decision (EU) 2015/774

- ✓ *For a euro area member state that is under a financial assistance program (and for which a waiver on the required credit quality threshold has been granted), eligibility for PSPP purchases should be suspended during a program review and resume only in the event of its successful completion*
- ✓ *The period of purchases under the PSPP is generally limited to two months following the successful completion of a review. That is, unless there are exceptional circumstances justifying a suspension of purchases before or a continuation of purchases after this period and until the start of the next review*
- ✓ *All other PSPP modalities as regards eligibility criteria, purchase eligibility limits and allocation of portfolios are the same for both program and non-program euro area countries*
- ✓ *Restrictions to be taken into account when estimating the potential size of marketable debt that can be purchased by the ECB and NCBs of the euro area:*
  - security-specific limit of 33% (notional terms)
  - issuer-specific limit of 33% (notional terms)
  - 1-yr ≤ eligible security tenor (remaining maturity) ≤ 30-yrs plus 364 days

### Estimating the potential size of Greek debt that can be purchased by the Eurosystem

- ✓ the monthly notional amount of Greek debt that could be purchased (after Mar. 2017) should not exceed €1.57bn (=2.9055% x 90% x €60bn), or c. €2.24bn in prevailing market prices, where:
  - 2.9055% is Bank of Greece's subscription key in the ECB capital;
  - 90% is the share of PSPP purchases of securities issued by eligible central governments and recognized agencies;
  - €60 bn is the amount of combined (average) monthly purchases under PSPP
  - The maximum *cumulative* amount of Greek securities (in notional terms) that could be purchased is between €3bn and €4bn

## Evolution of cumulative purchases of eligible Greek debt under PSPP (in EUR bn)

Maximum purchases limit could be attained over a period of at least two months
